

Bridging Learning Outcomes and Module Specifications: GenAI Framework for Curriculum Development in CS Education

Mohamed Elawady^{1*}, Hazrat Ali²

¹University of Strathclyde, ²University of Stirling

Background

- Recent advances in generative AI (GenAI) enable the creation of high quality educational and computing content.
- GenAI provides opportunities to modernise curriculum development and teaching practices.

Idea

Four-stage framework for curriculum development of computer science modules:

1. Metadata Input
2. Knowledge Engine
3. Suggestion Engine
4. Consistency Verification

Future Work

- Incorporating international institutional constraints
- Extending support to joint-institutional curriculum development
